(13) ABSTRACT (do not write outside this space)

We seek three 1-hr blocks of VLA time to follow up on the rare giant flare from the soft-gamma ray repeater SGR 1806−20. Radio emission in the form of a radio afterglow has been detected previously only once in the aftermath of the giant flare of 27 August 1998 from SGR 1900+14. A detection would lead to an accurate position for future astrometric studies with implications to origins of these enigmatic objects. Modeling of the radio emission offers us a unique opportunity to determine the composition of the particles in the wind that powers the giant burst, which is expected to be purely leptonic.

Notes to the table (if any):

(19) Restrictions to elevation (other than hardware limits) or HA range (give reason):

(20) Preferred range of dates for scheduling (give reason):

(21) Dates which are not acceptable:

(22) Special hardware, software, or operating requirements:

(23) Please attach a self-contained Scientific Justification **not in excess of 1000 words.** (Preprints or reprints will be ignored.) Please include the full addresses (postal and e-mail) for first-time users or for those that have moved (if not contact author). When your proposal is scheduled, the contents of the cover sheets become public information (Any supporting pages are for refereeing only).
