(13) ABSTRACT (do not write outside this space)

SN 2006X is a very young ($t \sim$ few days), nearby ($d \sim 17$ Mpc) Type Ia supernova discovered on February 7. The proximity and age of this SN are very favorable for a deep search for radio emission produced by the dynamical interaction of the ejecta with the circumstellar medium. These observations, taken together with the multi-frequency data available from ground-based and space-based programs, may shed light on the progenitors of thermonuclear supernovae.

Notes to the table (if any):

(19) Restrictions to elevation (other than hardware limits) or HA range (give reason):

(20) Preferred range of dates for scheduling (give reason):

(21) Dates which are not acceptable:

(22) Special hardware, software, or operating requirements:

(23) Please attach a self-contained Scientific Justification **not in excess of 1000 words.** (Preprints or reprints will be ignored.) Please include the full addresses (postal and e-mail) for first-time users or for those that have moved (if not contact author). When your proposal is scheduled, the contents of the cover sheets become public information (Any supporting pages are for refereeing only).
